Retraction Note to: Upregulating MicroRNA-410 or Downregulating Wnt-11 Increases Osteoblasts and Reduces Osteoclasts to Alleviate Osteonecrosis of the Femoral Head

Yukun Yin^{1†}, Lixiang Ding^{2*†}, Yu Hou², Haoran Jiang², Ji Zhang², Zhong Dai³ and Genai Zhang^{2*}

Retraction Note: *Nanoscale Research Letters* 14, 383 (2019)

<https://doi.org/10.1186/s11671-019-3221-6>

The Editors-in-Chief have retracted this article. Concerns have been raised regarding a number of figures, specifically:

- Figure 5B: overlapping features can be seen within and between the “ONFH”, “agomir-NC”, “agomir-miR-410” and “Wnt-11-siRNA” panels.
- Figure 5G: blots can be seen to have highly uniform contrast against a uniform grey background.
- Figure 6C: overlapping features can be seen within and between the “agomir-NC”, “siRNA-NC”, “Wnt-11-siRNA”, “agomir-miR-410+OE-NC” and “agomir-miR-410+OE-Wnt-11” panels.
- Figure 7D: blots can be seen to have uniform contrast against a uniform grey background.
- Figure 8E: blots can be seen to have uniform contrast against a uniform grey background.

- Figure 8F: overlapping features can be seen within and between the “Normal”, “ONFH”, “agomir-NC”, “agomir-miR-410”, “siRNA-NC”, and “agomir-miR-410+OE-NC” panels.

The Editors-in-Chief therefore no longer have confidence in the reliability of the data reported in the article. The authors have not responded to any correspondence from the editor/publisher about this retraction.
